ELECTROMAGNETIC FLOW METERS FLONET FR 10xx

FLONET FR 10xx

Electromagnetic flow meters of the type series FLONET FR 10xx including the Rosemount electronic convertes measure conductive liquids in water and heat supply systems, chemical, food processing and other industries. They meet the most stringent requirements on measurement accuracy, long-term stability and hygienic standards. Flow-rate measurements in both directions of flow are possible. The meter sensor has no movable mechanical parts and its inclusion in the piping system will have no effect on the hydraulic or pressure flow conditions. The converter unit provides for sensor energising and processing of sensor signals. The meter has frequency and current outputs, as well as interfaces to the Hart and Foundation Field Bus communication lines. Information is displayed in English.
